

## Requirements to run application:

- Java Runtime Environment

## Running the application

1. Download 'ReliableDataTransfer' folder.
2. Run the Java application in the environment of your choice.
3. Follow instructions on output:
  - Specify the number of packets to send.
  - Specify the probability of packets loss \*(decimal e.g .3).
  - Specify the probability of packets corruption \*(decimal e.g .3).
  - Specify the time between messages from sender (layer 5).
  - The trace level refers to detail of the output (3 = max).
4. Inspect the output and note the recovery from packet loss and corruption.
