Requirements for running this application:
- Java Runtime Environment

Steps to run the application:
1. Clone/Download 'Reliable-Data-Transfer' Repo.
2. Run the Java application in the environment (IDE) of your choice.
3. Follow instructions on output:
   Specify the number of packets to send
   Specify the probability of packet loss *(decimal 0.3)
   Specify the probability of packet corruption *(decimal 0.3)
   Specify the time between messages sent from A
   The trance level refers to the detail of the output (3=max)
4. Inspect the output and note the recovery from packet loss and corruption.
